

LOCAL INSTALLATION INSTRUCTIONS

Energy AI Hackathon 2026 - Energy Gladiators

Step 1: Install Python

1. Open the Windows search bar and type **Python**
2. Click on **Python 3.12** from the Microsoft Store
3. Click **Install** and wait for it to complete

Step 2: Download the Project

1. Go to the Replit project
2. Find the file **Energy_AI_Hackathon_2026_Workflow.zip** in the Files panel
3. Right-click and select **Download**
4. Save it somewhere easy to find (like Downloads)

Step 3: Extract the Zip

1. Find the downloaded zip file
2. Right-click and select **Extract All**
3. Choose where to extract (or just click Extract)

Step 4: Open Command Prompt in the Folder

1. Open the extracted folder
2. Click in the **address bar** at the top (where it shows the folder path)
3. Type **cmd** and press **Enter**

Step 5: Install the Required Libraries

Copy and paste this command, then press Enter:

```
pip install streamlit pandas numpy scikit-learn matplotlib seaborn  
plotly
```

Wait for it to finish (takes 1-2 minutes)

Step 6: Run the App

Copy and paste this command, then press Enter:

```
python -m streamlit run app.py --server.port 5000
```

Step 7: Open in Browser

Open your web browser and go to:

<http://localhost:5000>

That's it! The app should now be running on your computer.

You can make changes to **app.py** and refresh the browser to see updates.
